HANDCRAFTED NEAR CANADA IN THE USA

# 23/24 DREAM BOARDS

# LIB TECH THE LIB TECH EXPERIMENTAL DREAMSCAPE... A state of the art, environmentally friendly, zero hazardous waste board building facility tucked away in the upper left corner of the United States, near Canada. A beacon of light drawing in and driven by the world's most talented and original Ripper, crafter, artistic expireMENTALists chasing their dreams of a life well spent in pursuit of fun. This is the house that Jamie Lynn built. This is Travis Rice's home. A small and rather humble place that carries big ideas into each and every board we make. ExperiMENTAL ideas born in our dreamscape that turn into Lib Tech Dream Boards in your hands ready to bring your wildest snowboard dreams to life. Your backyard, your local rope tow, green circle, blue square, black diamond, banked slalom, 9 stair, triple kink, butter pad, booter, groomer, untouched glade, unridden peak or dropping into the Natural Selection finals...we craft the board of your dreams. # MAGNE-TRACTION **EFFORTLESS EDGE HOLD**

#### **SERRATED STEAK KNIFE TECHNOLOGY**

Strategically located edge serrations provide unreal edge hold and control in all conditions. TURNS ICE INTO POWDER.

# BANANA TECHNOLOGY **EFFORTLESS CONTROL**

THE ORIGINAL ROCKER/CAMBER HYBRID CONTOURS PATENT #7823892 #8511704

**ENGINEERED FOR SNOWBOARDING:** Rocker between your feet / camber outside your feet

- Full tip to tail contact and control in all conditions
- Central Rocker
- Engages middle of board between your feet
- Provides natural positive carving arc
- Improves edge pressure distribution resulting in better carving with less chatter and washouts
- Adds float and freedom in soft snow and powder.
- Allows a more centered weighting resulting in less fatigue
- Depressurizes tip and tail for freestyle freedom.

#### Cambers to tip and tail define boards personality and ride

- Harmonizes with central rocker to improve edge pressure distribution resulting in better carving with less chatter and washouts
- Adds, pop, power, liveliness
- Adds, precision, control, stability

#### **ENGINEERED FOR SNOWBOARDING:**

Over a decade ago Lib Tech's experieMENTAL division started a snowboard contour revolution with the introduction of the legendary Skate Banana model and Original Banana Technologie's mild rocker between your feet combined with mild cambers to the tips and tails.

- Full contact and control in all conditions
- Central rocker builds in carve, edge hold and float
- Cambers build in pop, stability and control

#### **ENGINEERED FOR SNOWBOARDING:**

Carves the resort, plays in the park and slays the powder. We worked with Travis Rice to develop this perfectly balanced all terrain contour. Mild rocker between your feet combined with powerful cambers to the tips and tails. Enough power, pop, and precision to hit the biggest wedges. Enough float and freedom to rip the gnarliest AK lines.

- Full contact and control in all conditions
- Central rocker builds in carve, edge hold and float
- Powerful cambers build in pop, stability and control

#### ENGINEERED FOR SNOWBOARDING:

CAMBER 3: this is camber engineered for high performance snowboarding. Very mild rocker between your feet combined with powerful cambers to the tips and tails. Mild rocker balances pressure distribution tip to tail eliminating the "dead space" between your feet, maximizing edge hold, pop, power and precision with the benefit of a little extra float and carve when you need it.

- · Efficient tip to tail edge pressure distribution and control
- · Central micro rocker builds in carve, edge hold and float
- Overall tip to tail camber builds in pop, power and stability

# INNOVATIONS EVEN WE DON'T UNDERSTAND

#### A GLOSSY MATERIALS AND PROCESS GLOSSARY

#### **ECO SUBLIMATION**

Our unique proprietary water based graphic process. It's awesome, smells nice and looks great. Eliminates toxic solvent based inks used by most manufacturers. Allows the use of families of materials previously un-sublimateable.

#### **BIO BEANS TOP MATERIAL**

Our plant oil based top material is environmentally friendly, rugged, scratch resistant and prints amazingly well with our eco sublimation process.

#### **POLY TOP MATERIAL**

High strength, impact resistant, lightweight dimensionally stable UV and temperature resistant top material decorated using our environmentally friendly eco sublimation process.

#### THT BASE MATERIAL TITANIUM NANO TECHNOLOGY

The highest density UHMW and FASTEST base material without wax. TNT features our unique dual-layer thermal fusion "phase alteration" process which aligns the molecular chains into an engineered crystalline structure. The titanium layer reflects light and heat keeping the base at or near snow temperatures. The crystal layer is the fastest base material without wax making it a very consistent sliding surface in a wide variety of conditions and wax wear lifecycles. Wax to conditions as normal...board will remain fast even as wax wears. TNT produces optimal graphic reproduction with our proprietary water based eco sublimation process. Easy to maintain easy to repair.

#### SINTERED KNIFE CUT BASE MATERIAL

High density UHMW. Optimized wax retention and toughness. Wax regularly and repair professionally.

#### SINTERED SUBLIMATED BASE MATERIAL

High density dual layer UHMW. Optimized wax retention, toughness with a white titanium underlayer that reflects light and heat keeping the base at or near ambient snow temperatures and maximizes efficiency of our proprietary environmentally friendly eco sublimation process.

#### **BASALT FIBER**

Our unique volcanic fiber derived from basalt features amazing strength and dampening properties...allowing the creation of light, strong and amazingly smooth performance rides.

#### **MAGNESIUM FIBER**

High magnesium content glass fiber that has high tensile strength, high elastic modulus great overall strength to weight properties.

#### TRI AX GLASS

Our electric 0° x 45° x 45° oriented fiber combination creates the perfect balance of torsional responsiveness and overall flex performance.

#### **BI AX GLASS**

Our electric 0° x 90° fiber orientation builds in pop, stability, control and forgiveness / ease of ride.

Our favorite FSC certified fast growing, light, lively, strong wood core material. It's natures fiberglass!

Fast growing environmentally nicer light and strong and smooth riding wood core material

#### **VERTICAL GRAIN BIRCH**

Extremely rugged high impact 6 ply sidewall reinforcement.

#### **RECYCLED PET**

Ultralightweight smooth riding foam core material made from recycled polyethylene bottles.

#### **UHMWPE TIP AND TAIL**

Strong high impact ultra-high molecular weight polyethylene. Long molecular chains create unbelievable impact resistance, resilience, a smooth ride and minimize tip and tail spin weight.

#### **ANTI MATTER**

3-D Carbon reinforced spin weight reducing absence of matter in the tip and tails. Travis pushed our experiMental division for less weight we gave him Apex performance.

#### **UHMWPE SIDEWALLS**

Strong high impact ultra-high molecular weight polyethylene. Long molecular chains create rugged impact resistance, resilience and a smooth damp ride.

#### **CARBON-X**

Light strong, lively carbon fiber strands oriented at 30° to elevate torsional response from your feet to the contact points for optimized performance.

#### **CARBON MEGA-X**

Light, mega strong, ultra lively Carbon fiber 14 strand bands oriented at 30° to maximize control and response from your feet to the contact points for apex performance.

#### **UNI-DIRECTIONAL CARBON**

Light, strong lively carbon fiber running tip to tail for stiffness, power, pop and apex performance

ART BY: Coleen Lawler and Phil Hansen (philiphansen)

MERVIN & MADE **USA · ZERO HAZARDOUS WASTE** 

# **MATTEO SOLTANE**

Who are you, how old are you and what did you get a degree in?

Hi my name is Matteo Soltane im 23 and i got a material science engineering degree from the University of Washington.

What was your favorite trick you did today?
Favorite trick I did today at the mountain was probably cab 2 pull back

How long have you been riding Lib Tech boards?

My first mervin board was a GNU when I was 5 years old. Ever since then I've ridden mervin boards. I probably switched to Lib two years after that when I got a skate banana.

How many prototypes did it take for you guys to land on the final Off Ramp geometries, f ex, shape etc? Well we got the shape right off the bat cause Phil and I drew a few out and knew what we wanted so when I gave it to Cobb he did it perfectly on the first try. The geometries for the 157 were also pretty close on the first try. Phil rides the 157 and he liked the side cut and turning ability but wanted the camber to be flatter so we switched that in one prototype and Phil liked it. I ride the 154 and it took Cobb and I two rounds of prototyping to get the right width and sidecut for that size to be dialed in. The flex has changed every round of boards. We kept getting it a little softer each time until the last round so there were probably 3 to 4 different flexes we went through before finding the one.

You put in some work in the factory this summer, what was your job? I was a core shop technician in fancy terms.

What's something about working in the core shop that surprised you?

I feel like I had a pretty good idea of what it would be like but I was most surprised about how many people go into the construction of one board. At least three people in the core shop, someone in edging, lay up, a finisher and a few others along the way. It's a whole team.

Any crafters you want to shout out?

Krispin, Kenny, Alex, Mike, Paco, Tony core shop squad. They all made working back there fun and enjoyable. Also Asym Tim for finishing the off ramp prototypes, legend.

If Steven Cobb is Yoda than are you Luke? Or are you Anakin?

I'm going to say Luke because I want to help Lib, not destroy it. But if you think about it they both brought balance to the force in their own ways. The force should always have a balance of light and dark and the Jedi from the prequel trilogy lived in a time where there was no darkness. So in ways Anakin did fulfill part of his prophecy and restore balance to the force. Not sure how I can connect that to being good in this situation though...

Follow up question; who wins in a game of snow you or Grogu?
Grogu for now he beat Benny Milam in his hay day. Every year I creep a little closer, I think I got him next year.

What's your next dream board design?

I've been thinking about a dynamo-eqsue board that's a little more freestyle freeride oriented with souped up high end construction and tech. The dynamo is already one of my favorite boards and if it was combined with higher end tech and construction it could potentially be the best Baker board ever.

You've been going ballistic on your snowboard the last couple of years, what gets you pumped up to go out there and chuck carc so hard?

Snowboarding is just my favorite thing ever and I'm definitely addicted to it. The best feelings I have ever felt come from filming and doing tricks with my friends. Those feelings and friends are definitely what keep me stoked to get out there and board as much as possible.

You've been called the Suga Glidah...what's that mean and did I spell it correctly?

So close, it's spelled Shuga Glidah. Logy B and I found the original Shuga Glidah at baker brainbowl and then people just started calling me that and it stuck. But I'm down with sugar gliders so I'm down with the nickname.

TECHNOLOGIES

Welcome to the Lib Tech X Mayhem collection a combination of mutual love for board building across both surf and snow with "Mayhem" Matt Biolos and our ExperiMental division. Decades of design, risk taking, friends and amazing sessions and refinement went into every one of these hardcarving, pow floating game changing dream boards.

Matt is based out of San Clemente California and Mammoth Mountain. His passion for surfing and shaping is matched by his longterm love snowboarding. He was a snowboarder before he was a surfer. His precision, focus and attention to detail has made him a go to designer for the worlds best surfers from world champions to freesurfers. His understanding of the needs of the average surfer and ability to apply world tour design concepts to shapes for recreational surfboards in a way that elevates all our surfing performance makes him the peoples champ. His punk rock attitude and drive to be the best make him one of surfings most successful and unique characters. Matts highly experienced meticulous eye for design, lines, flow, function and aesthetics transfer beautifully from surf to snow...get on one of his three Lib X Mayhem colabs and will immediately feel the focus on bottom turn minded carving with deep progressive radius sidecuts that offer a magnatraction like tail hold. Every board he works on has variation of an early rise "no pearl" pow friendly nose which also is a part of the secret to effortless turn initiation on hardpack. Matt puts all his shapes on powerful cambers set back to harmonize with the progressive sidecuts. All of Matt's projects are tested top to bottom at Mammoth by Matt and friends and ATV wizard born and raised in Mammoth Wave Rave shredder staff member Devin "Tubbsy" Tubbs. The boards rip for Devin and Matt they are guaranteed to rip for you.

#### **ALL MOUNTAIN / FREESTYLE - DIRECTIONAL**

- HIGH PERFORMANCE ONE BOARD QUIVER
- · CARVES, FLOATS, FLIES, FLIPS AND KILLS ALL TERRAIN
- DIRECTIONAL FREESTYLE SHAPE AND PROGRESSIVE CARVING SIDECUT

PARK BACKCOUNTRY DAY 1 INTERMEDIATE ADVANCED **MEDIUM** FIRM

We work with Matt Biolos to fine tune his shapes every year. The high performance directional freestyle ATV Quiver Killer squash tail features Matt's signature elliptical progressive sidecuts. Mammoth Mountains freestyle all mountain wizard Devin Tubbs helped us dial in the balance of set back, sidecut and tip to tail camber guaranteeing it powers through carves and big landings in the park or off the rocks. A full sized easy entry nose blasts chunder and floats the pow. The precise surf minded progressive carving sidecut trenches top to bottom lines like a race board. All this on a firm flexing, poppy, stable, sustainable Aspen/Paulownia wood core body with a rugged sintered knife-cut base and eco sublimated graphics. This year's Quiver Killer absolutely eliminates the concept of design compromise... it's all maximize!

"Building your own snowboard gets the nerves pumping, making sure everything is layed up properly, but once you get to laying resin it becomes meditative. But the most satisfying part of the process is taking the board out of the press, it's hot, steamy, and you get to see all of the layers of the board bonded together ready to get finished to rip!"

# LIBTECH HANDCRAFTED NEAR CANADA IN THE USA

"I'm a little embarrassed to even say this but after 21 years of riding for Lib Tech, I finally pressed a board together for the first time. Everything that goes into the making of a single board, from construction to the fine tune finish was so cool to see and gave me an even greater respect to the builders who make dream boards for our enjoyment. Im so grateful, after all these years to still be with a brand that gives a shit. Now let it snow!"

**ERIC JACKSON** 

### **ALL MOUNTAIN - DIRECTIONAL**

- EJACK'S HARD SLASHING CLIP STACKING STOMPER
- NEW 3-D SPOON NOSE FLOATS THE POW
- RUGGED RESORT RIPPING SINTERED BASE

DAY 1 INTERMEDIATE ADVANCED

MEDIUM

FIRM

Eric grew up in the park at Mammoth and is now right at home at Mt. Baker and anywhere steep and deep. Eric's dream board is designed to excel in all conditions with a focus on pushing freestyle progression to his backcountry playground. A powerful C3 camber body that rips the hardpack combined with a smooth early rise, new extra pow friendly soft serve spoon nose and mildly tapered tail to stomp landings. Now built with a rugged high performance eco sublimated sintered base.

### **MAGNE-TRACTION®** EFFORTLESS EDGE HOLD

### **ALL MOUNTAIN - DIRECTIONAL**

- DREAM DIRECTIONAL SHAPE AND CONTOUR FOR WHAT TRAVIS CALLS FUN
- APEX FREERIDE POW RIPPER MEETS RESORT SLASHING DAILY DRIVER
- FLOATY NOSE, TIGHT SIDECUT, MAXIMUM POWER TAIL

RIDER LEVEL: DAY 1 INTERMEDIATE ADVANCED FLEX: SOFT

17.5"-22.5" / 2"

Not your gutless fish. Travis has juiced up this Jackson Hole resort slasher into an apex all terrain tech shred predator. A long floaty nose combined with a powerful poppy contact maximizing short radius "Whale Tail Technology". A tight 7m trench gouging sidecut. Wide enough to allow you to really put it on a hardpack rail with no toe drag and float pillows like a dream but still narrow enough to be your daily driver all season long. Take it to AK, drop BC pillow stacks or blow minds at the home resort all season. A mammal to eat all fish. TR. Award winning! VOLUME SHIFTED, RIDE THIS BOARD 3-6 CM SHORTER THAN YOUR NORMAL BOARD.

Travis and Mervin will be donating a portion of the sale of each Orca snowboard to the www.orcaconservancy.org in support of their efforts to prevent the extinction of the Salish Sea's Southern Resident Killer Whales, #betheirvoice

Matt Cummins has been designing boards with us for 30+ years. He put a lifetime of Baker/Baldface/Japan honed pow knowledge into this beautiful hourglass, surfy, floaty, carvy shape. This do it all shape with a fun carvy sidecut is a perfect surf minded, resort friendly, daily driver. The big floaty nose is basically unsinkable in pow and the turned up tail gives you backcountry and freestyle freedom. Best pow day resort board of all time. VOLUME SHIFTED RIDE THIS BOARD 2-10 CM SHORTER THAN YOUR NORMAL BOARD. 665 SQUARE INCHES SURFACE AREA.

### experiMENTAL / ULTRA TECH FREERIDE - DIRECTIONAL

- MIKE OLSON'S FLOATY, TECHNO TECH, 360 CARVE BOARD
- ENHANCED GEOMETRIES RIP POWDER, ICE AND SNOW
- CARBON OVER CARBON OVER RECYCLED PET

PARK

RIDER LEVEL: DAY 1 INTERMEDIATE ADVANCED

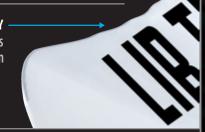

Mike Olson took everything he has learned about board geometries and construction in the past 40 years and created the Techno Pop Cygnus BM. Founded on a dynamic "enhanced banana" (2 contour the Cygnus BM floats effortlessly in powder and its perfectly tuned cambers and deep sidecuts combine with the radical central rocker to set up incredible edge hold and carving on hardpack and ice. All this is built in the most space age Mike Olson genius composite construction possible; unidirectional carbon over 30° carbon mega X over magnesium fiber bands wrapping a recycled PET plastic bottles, Paulownia, and FSC° certified Aspen core. Eco sublimated bio beans top and rugged, fast sintered base. The results are magically fun, dreamy, high performance all terrain snowboard that is sure to put a smile on your face and a 360 carve in theirs.

STEELY-D

experiMENTAL / FREERIDE

ART BY: Quincy Quigg

### **NEW**

### **experiMENTAL FREERIDE - DIRECTIONAL**

- CAMBERED RESORT ATTACK TICKLER
- LONG FLOATY GENTLE ENTRY SPOON NOSE
- DEEP CARVY PROGRESSIVE SIDECUTS

**BACKCOUNTRY** 

DAY 1 INTERMEDIATE ADVANCED

**MEDIUM** 

Experiments happen when you have a snowboard kitchen... we thought about doing a retro board and then we thought why don't we make an all new modern classic?! The Steely-D features a deep progressive radius carving sidecut that lays savage trenches. Floaty waist widths that won't have your toes draggin' but nimble enough that your turns won't be laggin'. A powerful camber contour sets up hard charging stability, pop and drive for SFD lines. We put a big gentle entry nose on this thing so it would float all camber and couldn't resist adding a little soft serve roll in the nose for cigarette boat powder penetration. The tail is tight and ready when you want to flick the switch. We kept the art simple and subtle so the shape does the talking but there is a little Quincy Quigg mind melter lurking in the dark.

FIRM

The Cortado is a balanced all mountain board that hits the sweet spot between freestyle and freeride. Not coincidentally, the Cortado coffee drink is a 1 to 1 balanced ratio of espresso and milk. The C2 contour and Magne-Traction® edges make precision turns with catch-free ease. The gentle entry on the nose and tighter kick on the tail are for comfortable float and control on all terrain and variable snow conditions. Balance out those natural terrain runs with some laps through the park and the Cortado will be ready for performance action, with a double shot of fun.

#### **MAGNE-TRACTION® EFFORTLESS EDGE HOLD**

#### **SERRATED STEAK KNIFE TECHNOLOGY**

7 strategically located edge serrations provide unreal edge hold and control in all conditions.

#### **ALL MOUNTAIN - DIRECTIONAL**

- THE PERFECT POWER PERFORMANCE ALL MOUNTAIN RIPPER
- DYNAMIC DAILY DRIVER OR DREAM TRIPPER
- AGGRESSIVE C3 CONTOUR AND SLIGHTLY TAPERED TAIL

PARK

DAY 1 INTERMEDIATE ADVANCED

**MEDIUM** 

FIRM

The Dynamiss is a dynamic all terrain snowboard that is as comfortable charging and carving on resort runs as it is floating on dreamy pow days. The powerful directional C3 contour with a smooth entry nose and slight taper in the tail sets this board up for hero status. Crush the crud, float in the powder, and rail turns with the confidence that comes with Magne-Traction\* edges. The Dynamiss is as classic and powerful as Jamie Lynn on a pow day at Baldface.

#### **ALL MOUNTAIN - DIRECTIONAL**

- DREAM DIRECTIONAL SHAPE AND CONTOUR FOR WHAT TRAVIS CALLS FUN
- APEX FREERIDE POW RIPPER MEETS RESORT SLASHING DAILY DRIVER
- FLOATY NOSE, TIGHT SIDECUT, MAXIMUM POWER TAIL

RIDER LEVEL: DAY 1 INTERMEDIATE ADVANCED

Not your gutless fish. Travis has juiced up this Jackson Hole resort slasher into an apex all terrain tech shred predator. A long floaty nose combined with a powerful poppy contact maximizing short radius "Whale Tail Technology". A tight 7m trench gouging sidecut. Wide enough to allow you to really put it on a hardpack rail with no toe drag and float pillows like a dream but still narrow enough to be your daily driver all season long. Take it to AK, drop BC pillow stacks or blow minds at the home resort all season. A mammal to eat all fish. TR. Award winning!

VOLUME SHIFTED, RIDE THIS BOARD 3-6 CMSHORTER THAN YOUR NORMAL BOARD.

Travis and Mervin will be donating a portion of the sale of each Orca snowboard to the www.orcaconservancy.org in support of their efforts to prevent the extinction of the Salish Sea's Southern Resident Killer Whales. #betheirvoice

- NEW SHAPE, DIRECTIONAL ELLIPTICAL CARVING SIDECUT SYNCED WITH A **SET BACK PÓWER CAMBER**

PARK

RIDER LEVEL: DAY 1 INTERMEDIATE ADVANCED

Matt Biolos' all new surf inspired ripper. The Rocket features a brand new shape, progressive elliptical sidecuts paired with a powerful set back camber and stance to create the ultimate hard pack carving power trenching machine. An easy initiating and extra floaty early rise nose and powerful poppy tail rip through the storm and shine in every condition on the mountain. A mid wide shape has lots of planning surface explodes through no toe drag power turns and floats the soft stuff. A firm flexing, sustainable Aspen/Paulownia wood core, rugged sintered base and eco-sublimated graphics will have you blasting around the mountain all year long. This Rocket is balanced to perfection and always ready for lift off.
